

ECMAScript Exercise 3 (Understanding Scope and Closure)

Exercise:

Write a function **createFunctions** that takes an integer *n* as an argument and returns an array of *n* functions. Each function, when called, should return its index in the array.

Write a function **createCounter** that returns an object with two methods: **increment** and **getCount**. The **getCount** method should return the current count, and **increment** should increment the count by 1.
